Type of presentation. Oral presentation. ISR, Scientific Session. 08.05.2019

Abstract

This study is part of an ISR research project; "Evaluation of the talents selection methodology in sport"(gaming sports). The study was built on the basis of a questionnaire designed with 32 questions and sub-questions for specific areas. The purpose of this questionnaire is to identify the current concept and methodology of selection and development of new talent that apply to the sport of gaming in our country. On this database will be given evaluations and recommendations for improving the work in this regard, referring to the best standards. This questionnaire is made available to all Tirana sports associations; Basketball No.13, Volleyball No.10. Corresponding tables and graphs are drawn. Volleyball sports associations do not have a system for identifying and selecting talents but they use age-appropriate parameters; physical, physiological, psychological, personality, sociological. Sports associations believe that they should have a greater impact on quality improvement for young people and that they should; Coaches qualifications, player selections, infrastructure, financial resources, more training hours, management etc.
